Project Name	Laptop Request Catalog Item
Maximum Marks	2 Marks

Proposed Solution – Laptop Request Catalog Item:

The project addresses inefficiencies in the laptop request process by introducing a dynamic Service Catalog item in ServiceNow. The form includes guided instructions, conditional field visibility, and a reset feature to improve data accuracy and user experience. Built entirely with native ServiceNow tools, the solution is scalable, easy to maintain, and enhances operational efficiency. It reduces manual errors, supports governance through update sets, and can be expanded with approval workflows and role-based access for broader ITSM use.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Employees face delays and confusion when requesting laptops due to a manual and unstructured process. The lack of a guided digital form leads to incomplete data and poor user experience.
2.	Idea / Solution Description	A Service Catalog item is created in ServiceNow for laptop requests. It includes dynamic fields, guided instructions, and a reset button. UI Policies and Client UI Actions are used to enhance usability and ensure accurate data collection.
3.	Novelty / Uniqueness	The solution uses native ServiceNow features to create a dynamic, user-friendly form without external plugins. It simplifies the request process while maintaining governance through update sets.
4.	Social Impact / Customer Satisfaction	Employees benefit from a faster, clearer request experience. IT teams receive complete and accurate data, reducing follow-ups and improving service delivery.
5.	Business Model (Revenue Model)	While not directly revenue-generating, the solution saves time, reduces manual errors, and improves operational efficiency — contributing to cost-effective ITSM practices.

6.	Scalability of the Solution	The catalog item can be extended to include approval workflows, role-based access, and additional hardware categories. It's adaptable for larger teams and future enhancements.
----	------------------------------------	---

Conclusion:

The project **Laptop Request Catalog Item** solves a key challenge in IT service delivery by replacing a manual, error-prone laptop request process with a dynamic and user-friendly digital form in ServiceNow. By guiding users through structured fields, conditional visibility, and reset options, the solution improves data accuracy, reduces delays, and enhances the overall user experience.

This implementation not only streamlines internal workflows but also supports IT teams with cleaner data and fewer follow-ups. Built entirely using native ServiceNow features, it ensures maintainability, scalability, and governance through update set tracking.

With future enhancements like approval workflows and role-based access planned, this solution lays a strong foundation for smarter, more efficient ITSM operations across the organization.
